

Edifecs EDI Gateway Cloud Service

Government and commercial payers face mounting pressure to modernize EDI transaction processing while keeping costs low and operations simple. Traditional solutions often require extensive customizations, complex integrations, and dedicated technology, making them impractical for small- or mid-sized payers. These organizations need a streamlined, cloud-native solution that delivers essential functionality without expensive overhead.

Edifecs EDI Gateway Cloud Service is a SaaS-only offering that provides a powerful platform for validating and translating EDI transactions while supporting compliance with industry standards. Payers can quickly onboard trading partners, configure workflows, and manage their EDI processes without the need for custom development or infrastructure.

Our solution enables payers to outsource eligibility and claim status inquiry transaction processing to Edifecs while enriching 27x responses using their own data, monitor transaction outcomes with basic visibility tools, and manage trading partners through a self-service interface.

By eliminating complexity and focusing on core functionality, EDI Gateway Cloud Service helps payers achieve operational efficiency and compliance—all within a scalable and budget-friendly cloud environment.

Key Capabilities and Features

What We Solve	How We Do It
Reliance on outdated, inflexible EDI systems for validation and translation	Real-time validation and translation of standard EDI transactions via RESTful APIs
Demand for real-time eligibility and claim status inquiry processing	Generates CORE-compliant 271/277 responses using payer-provided member and claim data via pre-defined ingestion formats
Limited visibility into transaction outcomes	Basic monitoring, logging, and auditing tools provide simple insights into transaction processing
Added cost and delays from custom updates to transaction rules	Configurable guidelines, maps, and severity files tailored to each trading partner with no custom development required
Requirement to enrich 27x responses with internal data	Multiple integration mechanisms for the ingestion of member, provider, and claim rosters enables dynamic response generation

Why Edifecs

- **292 million U.S. lives** covered by Edifecs products
- **Nearly 30 years** of EDI experience
- Used in **CMS ASETT validation**
- **Trusted by over 300 leading health plans**, providers, and government agencies
- **Supports all HIPAA-standard transactions** plus dozens of non-standard transaction types and specifications
