

Edifecs FHIR® Gateway

Driving Value Beyond Compliance

Edifecs FHIR Gateway is a SaaS-based platform that streamlines data exchange among payers, providers, and patients. Its modular design integrates with existing ecosystems and FHIR infrastructures, offering a flexible, unified approach to all CMS-mandated APIs and advanced use cases. FHIR Gateway supports modern APIs and bridges FHIR with legacy standards like EDI and HL7, allowing payers to consolidate all APIs into a single, flexible platform without requiring complex integrations.

- Pair prior authorization data with routing and decision logic to reduce costs and simplify integration with utilization management systems and external vendors
- Easily integrate with legacy systems to avoid costly updates or replacements, lower total cost of ownership, and accelerate time to value
- Expedite development with a secure, standards-based foundation for applications, portals, and third-party integrations
- Support Provider Access API, quality reporting, and value-based care programs with bulk data export capabilities

With millions of API calls processed daily across more than 50 payer organizations, Edifecs is a proven leader in data exchange and interoperability. FHIR Gateway transforms interoperability from a regulatory requirement into a strategic advantage that enhances care coordination, member engagement, and value-based care while maximizing return on investment.

Patient Access API

Includes requirements for CMS-0057-F
Empower members in their care journey

Provider Directory API

Includes requirements for CMS-0057-F
Help members find the most appropriate and timely care

Prior Authorization API

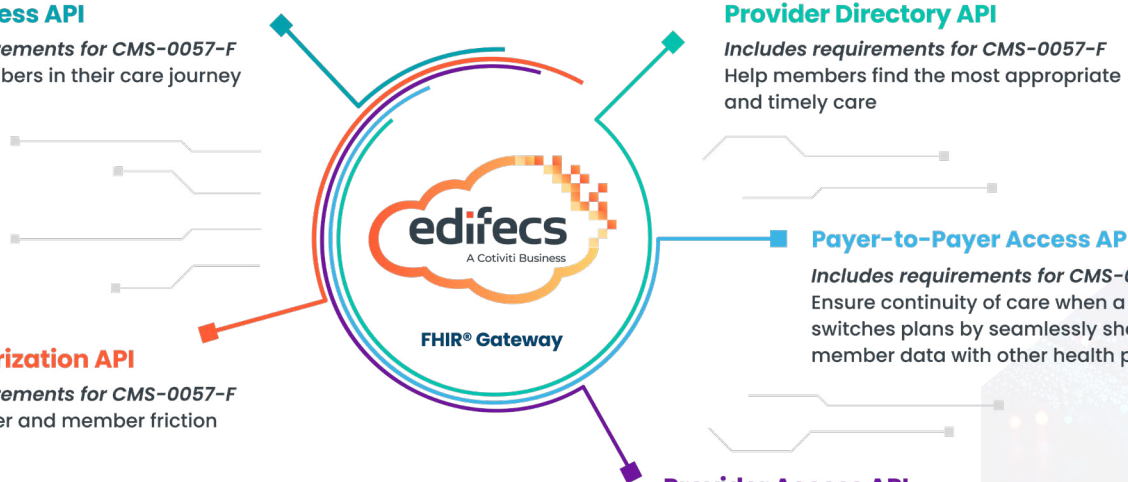

Includes requirements for CMS-0057-F
Reduce provider and member friction

Payer-to-Payer Access API

Includes requirements for CMS-0057-F
Ensure continuity of care when a member switches plans by seamlessly sharing member data with other health plans

Provider Access API

Includes requirements for CMS-0057-F
Help reduce care gaps and duplicative care, improve care coordination, and address social determinants of health (SDOH)

Key Capabilities and Features

What We Solve	How We Do It
Mandate compliance	<ul style="list-style-type: none"> • Deliver prebuilt APIs aligned with CMS interoperability requirements • Automate updates to address evolving regulations • Provide audit-ready reporting to verify compliance
Fragmented member data and authorizations	<ul style="list-style-type: none"> • Integrate member healthcare data with clinical quality and risk adjustment datasets • Streamline prior authorization workflows to reduce delays • Provide members with real-time access to their health data • Improve care coordination through provider access to complete records
Greater transparency in data sharing	<ul style="list-style-type: none"> • Provide secure, standards-based access to member data within EHR workflows • Ensure care continuity through payer-to-payer data exchange • Deliver actionable insights with dashboards and reporting tools • Enable FHIR-based exchange of attribution lists between payers and providers • Ensure member data is protected and accessible only by authorized providers through attribution logic and consent enforcement
Scale to meet growing demand and evolving business priorities	<ul style="list-style-type: none"> • Support millions of API calls daily with proven SaaS infrastructure • Scale capacity automatically to handle peak demand without added burden • Maximize uptime and continuity with HITRUST CSF-certified cloud service
Achieve more efficient consent and policy processes	<ul style="list-style-type: none"> • Integrate opt-in consent with member enrollment, payer portals, and customer service solutions • Manage member attribution and enforce opt-out for provider access • Implement an enterprise-wide consent framework with policy configuration and member-to-member consent • Enforce state-specific data privacy on outbound member data

Why Edifecs

- **Three decades** of healthcare data experience and expertise
- **Modular solutions** designed to meet you where you are
- **Fast, seamless deployment** with our low-/no-code integration engine and library of pre-built adapters
- **Founding member** of Da Vinci Project
- **HITRUST r2 certified**—the highest level of security and risk-based control
- **Vendor of Choice** by CAQH for Operating Rules Certification
- **Trusted by CMS** for Administrative Simplification and HIPAA Enforcement Testing

Go beyond compliance and unlock broader value with the FHIR Gateway.
