

As part of the Interoperability and Patient Access mandate, payers are required to share member data with other payers at the member's request. This can result in major administrative challenges in developing and maintaining a compliant solution. Obtaining credentials for data exchange with multiple payers can also be challenging. **CLOUD PAYER TO PAYER SERVICE** enables the real-time exchange of data in FHIR format between payers. The member is securely authenticated against their old and new health plan. This exchange of member data not only helps you meet an aspect of the payer to payer mandate, but it provides the foundation for better analysis. Address current mandate needs while evolving quickly for long-term sustainable growth and differentiation.

- Pre-built list including maintenance of new connections to avoid many-to-many connection combinations
- Automated data transfer from the old plan to new plan
- Management of onboarding, testing, and connections on your behalf
- Full visibility of member requests
- SaaS offering with minimal technology footprint
- Flexible integration options for uploading data to the FHIR server

**CLOUD PAYER TO PAYER SERVICE: INTEGRATE WITH NEARLY ANY CORE SYSTEM THROUGH OUR WEB-BASED, SECURE, MODULAR, AND CONFIGURABLE SaaS SOLUTION.**
